

MAKER ASTRA

Description

They are extreme pressure oils, especially suited to lubricating drills, hammers and pneumatic tools, even under severe working conditions. Also for all pneumatic mechanisms that require a fluid with the ability to capture water drops, thus preventing contact with metal surfaces.

Repsol Astra fluids are made with mineral oils obtained from paraffinic crude oils treated specially with solvents during the refining process in order to achieve excellent oxidation resistance properties. They include additives which increase their ability to support large loads and promote the formation of stable emulsions.

Properties

Good anticorrosive and antirust properties, both at high and low temperatures.

Emulsion form stable with water.

Excellent EP properties preventing the wear of mobile parts and reducing the formation of deposits and pollutants.

Good adhesion.

Quality levels, approvals and recommendations

• ISO 6743/11
